

DEVELOPMENTS IN ELECTRONIC COMMUNICATIONS NETWORK AND SERVICES

6 GHz Debate: Which Technologies deliver the biggest Benefits?

Mobile industry advocates to identify the upper 6 GHz band for International Mobile Telecommunications to accommodate the projected increase in the volume of mobile data. The only reason for the upper 6 GHz band (6.425–7.125 GHz) to be identified for IMT, if no other frequency in mid-band spectrum would be available for 5G services, said Eric Fournier. **Cullen International** ([read more](#) – subscription required)
