EU Countries set to turn new Telecom Law a Directive in all but Name

Discussions among member states on the EU's new telecom law point to providing countries with extensive flexibility, thus turning the regulation into a text reading more like a directive, but the main point of contention remains the 'tacit approval' principle. **Euractiv** ([read more](#))

Operators must increase their ESG Data Reporting in the Face of Increasing Legislative Pressure

"Some operators have made progress in reporting on – and reducing – their emissions, but the data makes it clear they have a long way to go." **Analysys Mason** ([read more](#))

IoT Connectivity will account for nearly 20% of Operators' Mobile Services Revenue from Enterprises by 2027

For enterprise-focused mobile operators, IoT is perhaps the most-crucial service for achieving revenue growth over the next 5 years. **Analysys Mason** ([read more](#))

Austrian Regulator continues Deregulation of the Wholesale High-Quality Access Market

The Austrian telecoms regulator, TKK, plans to deregulate Ethernet services and dark fibre in about half of the Austrian municipalities, comprising 73% of Austria's population and 93% of the provided wholesale high-quality services. **Cullen International** ([read more](#) – subscription required)

AGCOM consults on 2024–2028 Review of Fixed Access Markets

The Italian telecoms regulator, AGCOM, proposed full deregulation of wholesale central access and partial deregulation of wholesale local access and terminating segments of leased lines. **Cullen International** ([read more](#) – subscription required)
