

DEVELOPMENTS IN ELECTRONIC COMMUNICATIONS NETWORK AND SERVICES

Could AI be useful in Spectrum Management?

The Federal Communications Commission (FCC) will consider whether artificial intelligence (AI) could improve the collection of data on commercial spectrum usage to enable better spectrum management. It's an issue the EU and the UK are also exploring. **Policy Tracker** ([read more](#) – subscription required)

France prepares for Ultra HD Terrestrial TV

The French regulator Arcom has launched a public consultation to determine the capacity of a new multiplex for Ultra HD DTT services. **Broadband TV News** ([read more](#))

BT looks to repurpose Decommissioned Street Cabinets as EV Charging Ports

UK telco group BT's incubation unit, Etc, will begin a campaign of technical and commercial pilots to transform redundant street cabinets into electric vehicle charging points. **Telecoms.com** ([read more](#))

DEVELOPMENTS IN THE POSTAL SECTOR

Swiss Post reveals Plans to achieve Net Zero Carbon Target by 2040

Swiss Post has announced that, in order meet its target of net zero carbon emissions by 2040, it will look to actively extract carbon from the atmosphere through forest management. **Post & Parcel** ([read more](#))
