

## DEVELOPMENTS IN ELECTRONIC COMMUNICATIONS NETWORK AND SERVICES

### Mobile Industry set to win Spectrum in Upper 6 GHz in EU

The EU's RSPG will publish its recommendation soon. Sources say it will advise the European Commission and the CEPT to allocate 540 MHz to mobile services. **Policy Tracker** ([read more](#) – subscription required)

### European Commission seeks Participants for the Multi-Stakeholder Forum on Internet Standards Deployment

The Commission launches a forum to guide deployment of key Internet standards under NIS2 network security measures and promote wider industry uptake. **European Commission** ([read more](#))

## Openreach announces Price rises for Copper Products

Openreach will introduce increases on four of its copper-based products, which will involve prices doubling in the final three months before the Public Switched Telephone Network (PSTN) is switched off in January 2027. [Telecoms.com \(read more\)](#)

## UK Cyber Security Bill reaches Parliament

The UK government's bid to beef up the country's cyber defences has taken another step closer to reality. Having been announced in summer 2024, the Cyber Security and Resilience (CSR) bill has finally been introduced to Parliament, giving MPs the opportunity to debate its merits, address any potential shortcomings, and ultimately decide whether it should become a law of the land. [Telecoms.com \(read more\)](#)

## CNN looks to improve Mobile Reporting with T-Mobile Satellite Deal

T-Mobile has signed a deal with CNN that will “power the network’s reporting” via the former’s SuperMobile business plan, which includes satellite coverage. [Telecoms.com \(read more\)](#)

## Enabling the Era of Hyper-Personalisation through Agentic 6G Networks

“The integration of AI agents in user devices and in the mobile network (particularly a 6G network core) will unlock the full potential of network hyper-personalisation via mobile devices.” **Analysys Mason** ([read more](#))
